Application Number: 08/902,692
Date of Amendment: February 13, 2006

Date of Notice of Non-Compliant Amendment: February 6, 2006

## **CLAIMS**

1-48. (Canceled).

- 49. (Previously Presented) A method for treating a chemically sensitive individual comprising the steps of:
  - (a) collecting a blood sample from the individual;
  - (b) isolating normal mixed T and B lymphocytes from the blood sample;
  - propagating the isolated mixed T and B lymphocytes to obtain propagated lymphocytes;
  - (d) lysing the propagated lymphocytes to obtain a lysate; and
  - (e) administering the lysate to the individual.
- 50. (Previously Presented) . The method according to Claim 49, wherein the step of collecting a blood sample further comprises the step of: collecting the blood sample from the individual by venipuncture in heparinized tubes.
- 51. (Previously Presented) The method according to Claim 49, wherein the step of isolating normal mixed T and B lymphocytes from the blood sample further comprises the steps of: separating the erythrocytes and neutrophils from the blood sample by a density gradient technique to obtain a lymphocytic sample; centrifuging the lymphocytic sample; separating and combining the lymphocytic layers from the centrifuged lymphocytic sample; and washing the combined lymphocytic layers to obtain the isolated mixed T and B lymphocytes.
- 52. (Previously Presented) The method according to Claim 49, wherein the step of propagating the isolated mixed T and B lymphocytes further comprises the steps of: culturing the isolated mixed T and B lymphocytes with a cell growth medium at about 37°C.
- 53. (Previously Presented) The method according to Claim 52, wherein the cell growth medium is supplemented with bovine calf serum.

Application Number: 08/902,692
Date of Amendment: February 13, 2006

Date of Notice of Non-Compliant Amendment: February 6, 2006

- 54. (Previously Presented) The method according to Claim 52, wherein the step of propagating the lymphocytes further comprises the steps of: centrifuging the cultured lymphocytes; removing the supernate from the centrifuged lymphocytes; and washing the centrifuged lymphocytes in normal saline with further centrifugation to obtain the propagated lymphocytes.
- 55. (Previously Presented) The method according to Claim 49, wherein the step of lysing the propagated lymphocytes further comprises the steps of: suspending the propagated lymphocytes in normal saline solution; sonicating the suspended lymphocytes; and filtering the sonicated lymphocytes to obtain the lysate.
- 56. (Previously Presented) The method according to Claim 49, wherein the step of administering the lysate to the individual further comprises the step of: determining a therapeutic dose of the lysate by skin testing.
- 57. (Previously Presented) The method according to Claim 56, wherein the step of administering the lysate to the individual comprises the step of: injecting the individual subcutaneously with the therapeutic dose of the lysate.
- 58. (Previously Presented) The method according to Claim 57, further comprising the step of: injecting the individual subcutaneously with at least one additional therapeutic dose of the lysate.
- 59. (Previously Presented) The method according to Claim 49, further comprising the steps of: measuring the clinical symptoms and signs of the individual before administering the lysate, and then measuring clinical symptoms and signs of the individual after administering the lysate.

Application Number: 08/902,692
Date of Amendment: February 13, 2006

Date of Notice of Non-Compliant Amendment: February 6, 2006

- 60. (Previously Presented) A method for treating a chemically sensitive individual comprising the steps of:
- (a) collecting a blood sample from the individual by venipuncture in heparinized tubes;
  - (b) isolating normal mixed T and B lymphocytes from the blood sample by:
    - (i) separating the erythrocytes and neutrophils from the blood sample by a density gradient technique to obtain a lymphocytic sample;
    - (ii) centrifuging the lymphocytic sample;
    - (iii) separating and combining the lymphocytic layers from the centrifuged lymphocytic sample; and
    - (iv) washing the combined lymphocytic layers to obtain the isolated mixed T and B lymphocytes;
- (c) propagating the isolated mixed T and B lymphocytes to obtain propagated lymphocytes by:
  - (i) culturing the isolated mixed T and B lymphocytes with a cell growth medium at about 37°C;
  - (ii) centrifuging the cultured lymphocytes;
  - (ii) removing the supernate from the centrifuged lymphocytes; and
  - (iv) washing the centrifuged lymphocytes in normal saline with further centrifugation to obtain the propagated lymphocytes;
  - (d) lysing the propagated lymphocytes to obtain a lysate by:
    - (i) suspending the propagated lymphocytes in normal saline solution;
    - (ii) sonicating the suspended lymphocytes; and
    - (iii) filtering the sonicated lymphocytes to obtain the lysate; and
  - (e) administering the lysate to the individual by:
    - (i) determining a therapeutic dose of the lysate by skin testing; and
    - (ii) injecting the individual subcutaneously with the therapeutic dose of the lysate.
- 61. (Previously Presented) The method according to Claim 60, wherein the cell growth medium is supplemented with bovine calf serum.
- 62. (Previously Presented) The method according to Claim 60, wherein the culture is monitored until the yield is approximately 5-8 x 10<sup>6</sup> cells per ml.

RESPONSE TO THE NOTICE OF NON-COMPLIANT AMENDMENT MAILED FEBRUARY 6, 2006 - Page 4

Application Number: 08/902,692

Date of Amendment February 13, 2006

Date of Notice of Non-Compliant Amendment: February 6, 2006

63. (Previously Presented) The method according to Claim 60, further comprising the step of: injecting the individual subcutaneously with at least one additional therapeutic dose of the lysate.

64. (Previously Presented) The method according to Claim 60, further comprising the steps of: measuring the clinical symptoms and signs of the individual before administering the lysate, and then measuring clinical symptoms and signs of the individual after administering the lysate.

65 - 66. (Canceled)
